METHOD, SYSTEM, AND PROGRAM FOR SELECTING ONE

OF MULTIPLE CODE IMAGES TO

EXECUTE FOLLOWING A REBOOT OPERATION

ABSTRACT

Sub AF 5

Provided is a method, system, and program for method, system, and program for selecting a code image to execute. Multiple copies of a code image are maintained in a non-volatile memory device. A first operation routine is executed. A first counter is incremented if the first operation routine succeeds. A second operation routine is executed and a second counter is incremented if the second operation routine succeeds. The first and second counters are used to select one of the code images from the memory device to execute.
